

A scatter plot showing the distribution of Debt to Income (DTI) ratios for two groups, represented by red and blue dots. The x-axis is labeled 'Debt to Income' and ranges from 0 to 30. The y-axis is unlabeled. The red dots are densely clustered between DTI values of 0 and 25, with a few outliers extending to 30. The blue dots are more sparsely distributed, primarily concentrated between DTI values of 10 and 25, with a few outliers extending to 30. The overall distribution for both groups is roughly rectangular, spanning from DTI 0 to 30 on the x-axis and from 0 to approximately 10 on the y-axis.
